

AQUAMATIC 200 A/270 E

The Aquamatic 200 A/270 E is a further development of the six-cylinder Aquamatic model 170/270. The design of the unit is based on the extensive experience and the advanced technique that has made the Aquamatic one of the best known marine power units in the world for such a long time. The compact dimensions when fitted and the low weight of the unit in relation to the output make installation in fast, light-weight boats possible.

The engine and outboard drive are fitted through a mounting collar in the transom. The sturdy dimensions of the mounting collar and the large contact areas against the transom mean that the engine and the outboard drive form a seaworthy unit with the boat — even in the case of extreme stress.

Above unit is also available with Power Trim (AQ 200 A/270 TE).

All orders and inquiries concerning the AQ 200 A/270 E unit and parts should be sent to:
